

ZIVION — Business Requirements Document

Version 1.0 | Executive BRD

Page 1 — Product Overview

Zivion is a property and facility-management platform connecting:

Properties/RWA ↔ Residents ↔ Zivion ↔ Agencies ↔ Technicians/Security

The platform will manage property information, residents, agencies, workforce, service requests, security, visitors, deliveries, vehicles, amenities, documents, contracts and operational support.

Applications

Mobile Apps

1. Resident App
2. Agency App
3. Security App

Web Portals

1. Resident Portal
2. Agency Portal
3. Zivion Internal Portal

The Zivion Portal is strictly for Zivion employees and administrators.

Page 2 — Personas & Organization

Property Side

- Property
- RWA / RWA Associates
- Owners
- Tenants
- Adult Family Members
- Clubhouse
- Amenities
- Facilities
- Property Documents

- Property Contracts
- Parking
- Vehicles

Agency Side

- Agency President
- Agency Director
- Agency Operations Manager
- Agency Supervisor
- Agency Technician
- Agency Security Manager
- Security Supervisor
- Shift In-charge
- Security Personnel
- Other agency-provided manpower

Agencies provide technicians, housekeeping, security and other service manpower to properties.

Zivion Side

- Super Admin
- IT Admin
- Zivion Property Manager
- Help Desk Associate I
- Help Desk Associate II
- IT Operations
- IT Service Desk
- IT Legal
- IT Accounting
- IT Developer
- IT QA
- IT Manager

Page 3 — Resident App & Portal

Residents include **Owners, Tenants and authorized adult family members.**

Resident capabilities

- Registration/Login
- Property and unit information
- Owner/tenant profile

- Family member management
- Cases/Tickets
- Service tracking
- Visitors
- Gate Pass
- OTP/QR
- Deliveries
- Vehicles
- Amenities
- Clubhouse
- Documents
- Notifications
- Feedback

Owner Registration

Signup
↓
Mobile OTP
↓
Select Property / Unit
↓
Prefilled Information
↓
Upload Required Documents
↓
RWA Approval
↓
Owner Activated

Tenant Registration

Signup
↓
Property / Unit
↓
Owner Approval
↓
RWA Approval
↓
Tenant Activated

Tenants must not become active before required Owner and RWA approvals.

Gate Pass

Residents can create passes for:

- Guests
- Family
- Friends
- Drivers
- Domestic help
- Service providers
- Event guests
- Other visitors

Pass verification can use:

- OTP
- QR Code
- QR + OTP

Visitor Management

Track:

- Visitor
- Resident
- Unit
- Purpose
- Vehicle
- Entry/exit
- Gate
- Approval
- Security personnel

Contact-based Visitors

Residents can select a visitor from their contacts or enter a new phone number.

Only the selected contact information required for the visit should be processed.

Deliveries

Support:

- Swiggy
- Zomato
- Amazon

- Flipkart
- Blinkit
- Zepto
- Courier
- Other delivery providers

Workflow:

```
Delivery Arrives
↓
Security Identifies
↓
Resident Notified
↓
Resident Allows
↓
Package Dropped at Security/Designated Area
↓
Resident Collects
```

Page 5 — Security App

The Security App is used by agency-provided security personnel.

Security Roles

- Security Operations Manager
- Security Supervisor
- Shift In-charge
- Gate Supervisor
- Security Personnel
- Control Room Operator

Functions

- Visitor verification
- QR scanning
- OTP verification
- Gate Pass validation
- Vehicle entry/exit
- Delivery management
- Staff entry
- Domestic help entry
- Cab/driver entry
- Visitor history
- Incident reporting

- Emergency alerts
- Shift management
- Security handover

Security users only receive the resident information necessary for security operations.

Page 6 — Agency App & Portal

Agencies manage the workforce providing services to properties.

Agency roles

- President
- Directors
- Operations Manager
- Supervisors
- Technicians
- Security workforce
- Other service personnel

Agency capabilities

- Agency profile
- Properties served
- Contracts
- Service categories
- Workforce
- Technician skills
- Availability
- Work Orders
- Service Requests
- Scheduling
- SLA
- Technician performance
- Photos/documents
- Completion
- Reports

Service Categories

Configurable categories include:

- Plumbing

- Electrical
- Civil
- HVAC
- Housekeeping
- Landscaping
- Pest Control
- Security
- General Maintenance
- Other

The system must allow Zivion administrators to add new categories without redesigning the application.

Page 7 — Case → Work Order → Service Request

This is the **core Zivion service workflow**.

Case Creation

RWA, Owner or Tenant creates a Case through the Resident App/Portal.

```
Resident / RWA
    ↓
CASE
    ↓
Help Desk Associate I
    ↓
Review & Categorize
    ↓
Find Available Technician
    ↓
WORK ORDER
    ↓
SERVICE REQUEST(S)
    ↓
Assign Technician
```

One Case may contain multiple Work Orders, and one Work Order may contain multiple Service Requests.

Technician Assignment

Help Desk sees available technicians based on:

- Property
- Service category
- Skill
- Agency
- Availability
- Current workload
- Shift/status

After assignment:

Agency App notification + optional WhatsApp/SMS notification

Technician

Technician:

- Accepts assignment
- Updates status
- Travels to property
- Starts work
- Adds notes
- Uploads photos
- Completes Service Request

Technician **cannot close the Case.**

Page 8 — Work Order, Closure & Zivion Operations

Closure Workflow

```
Technician Completes SR
↓
All SRs Completed?
↓
Zivion Help Desk / Property Manager Review
↓
Work Order Closed
↓
Case Closed
↓
Resident Notification
↓
Feedback
```

If multiple SRs exist, all required SRs must be completed before the Work Order can close.

Zivion Property Manager

Responsible for:

- Assigned properties
- Cases
- Work Orders
- Service Requests
- Agency performance
- SLA
- Escalations
- Resident satisfaction

Help Desk Associate I

First-level support:

- Review Cases
- Categorize
- Assign technicians
- Communicate with residents
- Monitor open work

Help Desk Associate II

Second-level support:

- Escalations
- SLA breaches
- Complex cases
- Reassignments
- Agency escalation

Page 9 — Data, Security & Administration

Core Data

The solution should manage:

Property

- Towers
- Units
- Owners
- Tenants
- Family
- Amenities
- Clubhouse
- Parking
- Documents
- Contracts

Agency

- Agency
- Employees
- Supervisors
- Technicians
- Security
- Service Categories
- Skills
- Property Assignments
- Contracts

Service

- Cases
- Work Orders
- Service Requests
- SLA
- Assignments
- Feedback

Security

- Visitors
- Gate Passes
- OTP
- QR
- Vehicles
- Deliveries
- Security Events
- Incidents

Administration

- Users

- Roles
- Permissions
- Notifications
- Configurations
- Audit Logs

Security Principles

Security is a **P0 requirement**.

The platform must implement:

- Role-based access
- Permission sets
- Record-level security
- Field-level security
- Property-level access
- Agency-level access
- Least-privilege access
- Encryption
- Secure API access
- Authentication/authorization
- Audit logging
- Data retention
- Privacy controls

Key rule

Users can only access the data required for their role, organization, property and assigned work.

For example:

Technician → Assigned Service Requests only

Security → Security/visitor information for assigned property

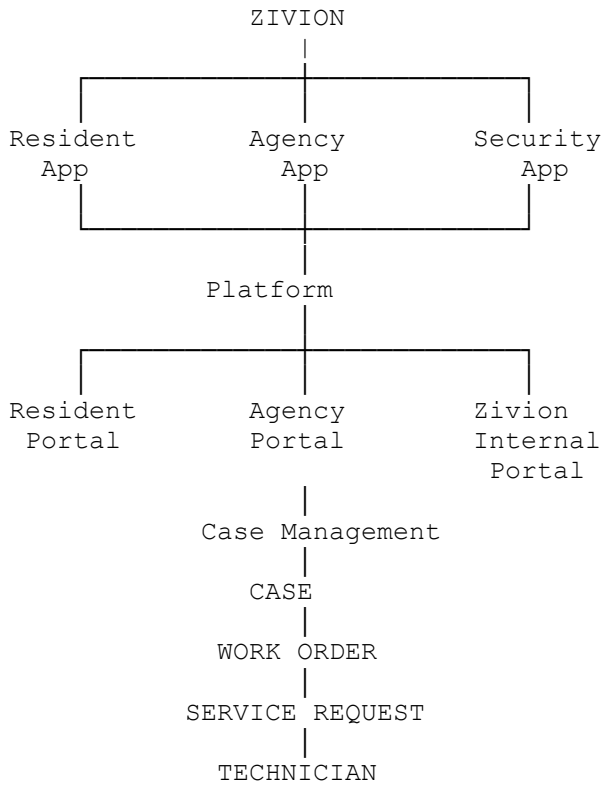

Agency → Authorized agency/property data

Resident → Own household/property information

Zivion employees → Access according to their internal function

Development and QA users should primarily work in lower environments, with production access tightly restricted and audited.

Target Architecture

Primary MVP

1. User/property onboarding
2. Owner/tenant approvals
3. Resident App
4. Agency App
5. Security App
6. Resident Portal
7. Agency Portal
8. Zivion Internal Portal
9. Case management
10. Work Orders
11. Service Requests
12. Technician assignment
13. Visitor/Gate Pass
14. OTP/QR
15. Deliveries
16. Vehicles
17. Property/Amenity management

- 18. Documents/Contracts
- 19. Notifications
- 20. Roles, permissions and security
- 21. Audit trail
- 22. Reporting
